The world of cryptocurrency excellence

What if you track the change in the iPhone price in Binance tokens?
How much money could you have already made from the difference?

Let's take a look at the prices at the time of the gadget's release:

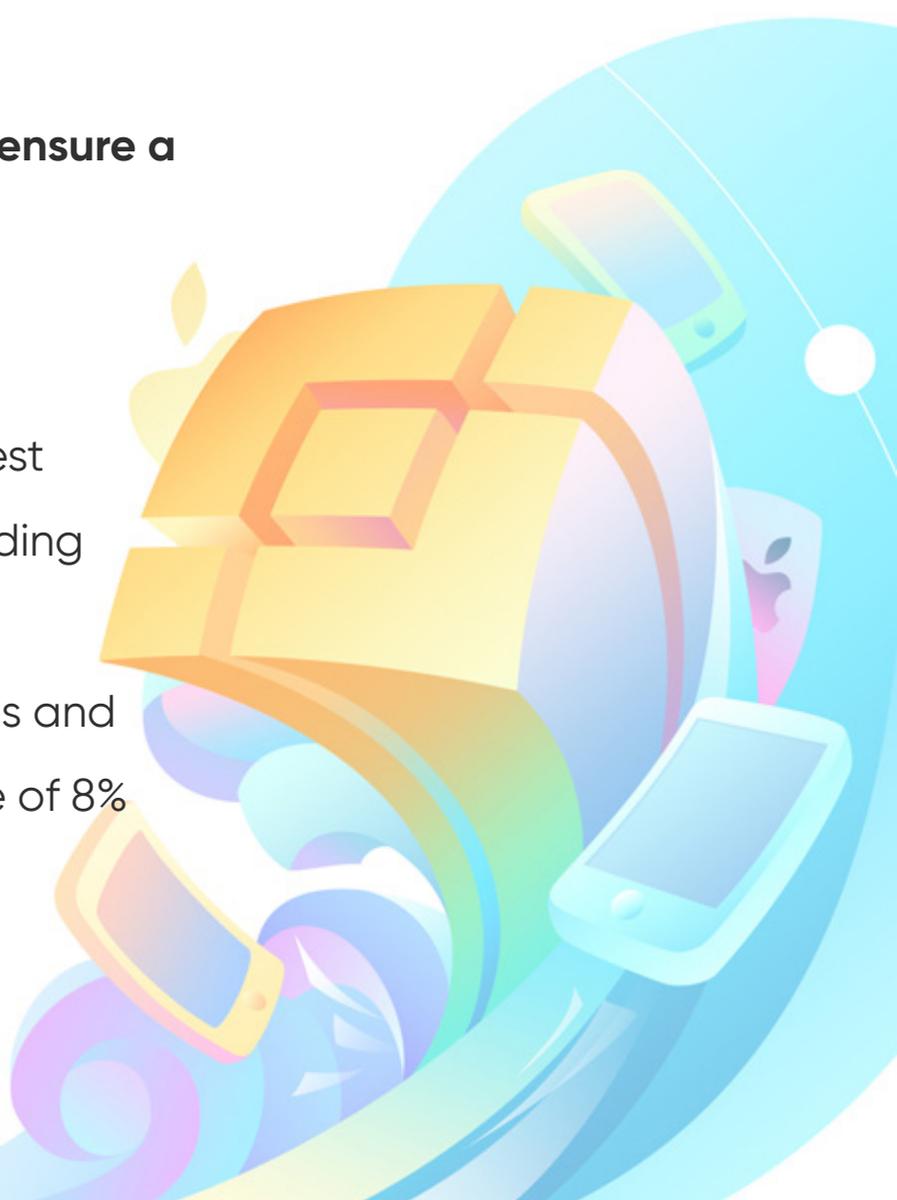

iPhone 8	1,186 #bnb
iPhone 10	682 #bnb
iPhone 11	35 #bnb
iPhone 12	26 #bnb
iPhone 13	1.85 #bnb

A new iPhone is presented every year, and more often than not the changes are minor, maybe apart from the camera. In fact, the iPhone 7 Plus can be used successfully in 2021 - not much has changed in it compared to the new technology: there is no OLED monitor that ruins your eyesight, and 5G is not useful at all.

Just imagine how much money could have been saved! We have already calculated that 1,929 BNB could have been saved. Today that's more than \$820,000 or 60 million roubles. With this money, you could buy a few flats in Moscow, open a business and sell smartphones yourself. Alternatively, you could still think about the future and increase your capital by investing in digital assets. It's up to everyone to decide.

By making a decision today, you ensure a successful future for yourself

How to scale your profits and get an additional stable income? Invest with Intelfin - an international holding company. Our automated system effectively manages your finances and allows you to earn a fixed income of 8% each month.

Investment competitiveness comparison

Is it profitable to invest in real estate in 2022?

Investing capital in property requires careful planning and attention. The cost of a mistake or any, even the smallest, error is expensive. In fact, this type of investment, like any other, has many of its own nuances, which become significant disadvantages. Consider these disadvantages.

● **Low property liquidity**

As an example, the small studios that have become so abundant in all sorts of cities in Russia and Europe. They were supposed to meet the demand of investors who did not have enough capital to invest in a full-fledged flat or room. Studios became a cheaper alternative that was being bought to rent out. But even now, tenants are opting for flats or rooms, while studios, according to experts, have proved to be an “illiquid misunderstanding”.

● **High investment capital requirements**

Not everyone can afford to buy even a small room on the outskirts of the city – this largely limits investment endeavours. Also complicating matters are the fees and the bureaucracy, which only take up your time, money and energy when buying a property.

● **Additional costs**

Any property may require minimal repairs and finishes or the purchase of new equipment for the house.

● **Failure to estimate future value**

Indeed, it is difficult to make predictions with dynamic infrastructure development.

Investing in a property requires a large sum of money that will not necessarily pay off. Intelfin offers new digital asset investments that are available to everyone.

Algorithms with artificial intelligence fully monitor investment markets and find the most profitable solutions. Intelfin investment platform has both hybrid and arbitrage robots at its disposal, allowing you to earn on price differences between assets and on the averaging strategy.

Start investing from as little as \$300 and earn a steady income, while you can always top up your investments and your finances are always available. Take care of your future now!

Investing in digital assets does not require a lot of capital and additional costs, as in the case of real estate. Everyone has the opportunity to invest in a **liquidity pool** or create an exchangeable token pair at any time. You can invest \$900 and earn a fixed income of 10% each month as an automated market maker (AMM).

When investing in real estate, it is almost impossible to assess future risks and predict the price of a property. And automated arbitrage and hybrid programmes fully monitor the market and create workable strategies, eliminating the possibility of risk and losing money.

The hybrid robot buys on the cryptocurrency market and simultaneously sells the corresponding futures instrument. When the price of a crypto asset rises, the algorithm compensates for the loss by forking.

When the price falls, the artificial intelligence-based fork algorithm takes profits on the futures and averages the order amounts already at a higher percentage. You can win on the averaging strategy because the average price will always be one of the low ones.

The arbitrage bot helps you buy and sell an asset in fractions of a second and profit from the difference in the price of the asset between exchanges. With our bot, you will get the most profitable investment opportunities.

High requirements for the investment capital are a thing of the past and modern investment methods are now available to anyone who wishes to do so. There is no need for in-depth knowledge of the market – smart systems will make effective decisions for you.

The conventional wisdom is that investing is a risky business, where any move can lead to mistakes and costs. But now the world has changed, and the Intelfin Group is keeping up with the times. We offer only innovative solutions that lead to positive results.

Tired of working with conservatively minded people and an outdated approach to investing?

Want to invest in digital assets and avoid risk?

Start investing in liquidity pools and earn a fixed income every month while Intelfin's smart system intelligently manages your finances and wins on the mathematical difference between asset prices!

Trust management or investing in digital assets?

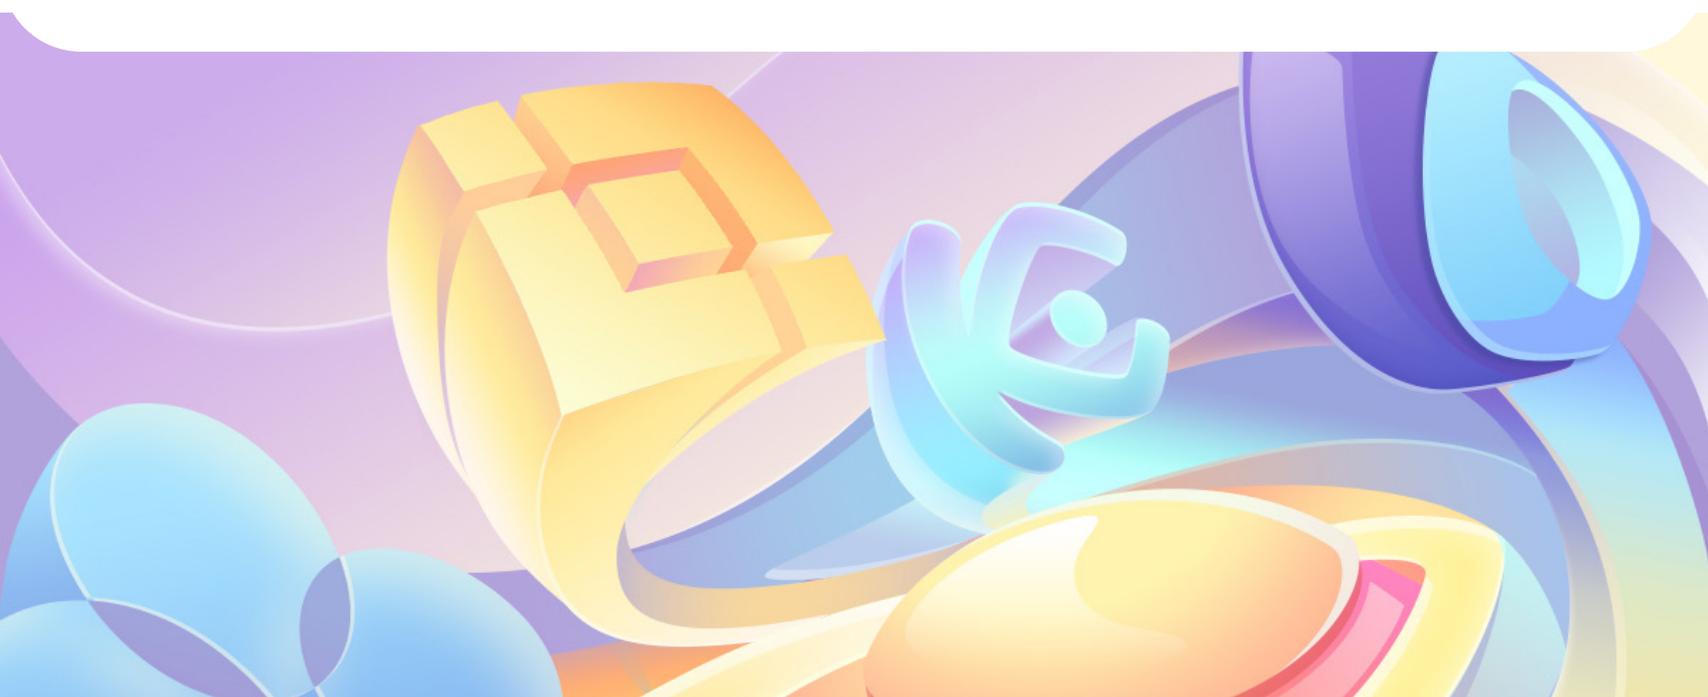

How to invest profitably in 2022?

Many ways of investing are already becoming a thing of the past, losing key advantages. One such way is trust management. Trustees can be traders, whole companies, agents, brokers, etc.

With trust management you put your capital on loan for the purpose of making a profit. At that time, your money is managed by a trustee. But the manager, no matter how professional, does not guarantee profits. It can turn out to be both a profit and a loss. The manager may turn out to be a crook and manage the capital/assets handed over to him as he sees fit.

In general, there are many nuances associated with trust management:

- the risk of fraud on the investor;
- the need to pay a percentage of commission to the management company; the specialist is supposed to pay a percentage of transactions + a monthly rate. As a rule, the amount varies from 30-50%;
- difficulty in selecting a qualified specialist;
- the need for a large amount of capital or an expensive trust property;
- inability to predict income and periods of loss. Everything can depend on both the experience of the professional you trust and external economic factors. No one is immune to inflation.

But you no longer need to put your asset or capital at the disposal of another person or company! People are prone to making mistakes and making wrong predictions, leading to a loss or reduction in returns. In a world where progress does not stand still, we offer innovative ways to invest for multiples of capital. Automated programmes, unlike humans, clearly monitor all data for a successful transaction.

Thanks to artificial intelligence systems which find effective investment solutions almost error-free, you will forget about risks!

Invest in liquidity pools and earn right now. Intelfin Group helps novice and experienced investors to invest without fear of lost profits - because we only offer solutions that are proven to be resilient in different markets. Become part of the open crypto ecosystem today!

Is it worth investing in equities in 2022?

Is the investment world full of outdated solutions? Stocks are skyrocketing, but do you want to make sense of the digital asset universe? Start investing in cryptocurrency with Intelfin Group's automated platform. Algorithms driven by hybrid intelligence will increase your capital by exploiting the difference between the prices of highly liquid assets.

Today's world has its own rules, and many investment tools that were effective in the past are no longer yielding returns. Since 2020, global inflation has risen by between 8 and 30%, depending on the country.

For example, according to Rosstat, inflation in Russia reached 4.9% in 2020. The Bank of Russia predicts that inflation in 2021 will already be 5.7% to 6.2%.

US inflation since the beginning of 2020 has been 1.36%. US inflation accelerated sharply in the spring of 2021, jumping to 4.2%, the highest since 2008.

According to the Bank of England, annual inflation in the UK rose to 2.5% in June 2021, while the inflation target is 2%.

Now any investment with a return of less than 30-40% per year is a waste of your finances. Money is cheapening faster than you have time to make a return.

Equity investing, like many other ways of investing, is highly susceptible to political and economic events. The economy is not stable, so the risk of losing money in times of inflation is very high.

Consider other downsides of investing in securities:

- shares have high volatility (the price of the asset on the secondary market). You can increase your investment, but you can also lose it very quickly. It is worth noting that falls are usually rapid and rises are a long-term process that takes several years;
- all share-buying processes are carried out with the help of a broker or a management company - you will not be able to buy shares yourself. Hence the additional costs associated with maintenance, taxes and commissions to be paid to the broker;
- like any other market, the stock market is virtually impossible to predict;
- you have no tools to influence the company unless you have a set number of shares to become a majority shareholder;
- the stock market also has a high entry threshold - you have to buy a significant number of shares in order to receive a tangible dividend.

If you entrust your capital to a broker, you risk losing it. The wrong investment strategy or the bankruptcy of a public company can cause securities to fall or lose their value. Even in the case of buying a large number of assets when lending to the issuer, it is impossible to influence. With a small amount of shares, you have only formal voting rights.

If you are tired of working with investment instruments that do not fit into today's high-tech world without limited conservative rules, the Intelfin Group platform offers innovative ways of investing in digital assets. We have pools of liquidity at your disposal, investing in which you will start earning between 8 to 14% every month.

We have created one of our automated programs for inter-exchange cryptocurrency arbitrage to invest with minimal risk and the highest returns. The system scans quotes between exchanges with a set frequency and looks for opportunities to successfully trade on price differences of the same asset.

With a pool managed by our arbitrage bot, earning on altcoins inter-exchange rate differences will become much easier. A smart system will increase your trading results and eliminate your risks.

Afraid to start investing in digital products and still prefer equities? Don't want to invest in an area you don't fully understand? Join the Intelfin platform - invest in digital assets with the help of an intuitive system and earn up to 14% every month.

On top of that, you'll be able to diversify and diversify your investment portfolio thanks to a 24/7 up and running hybrid bot. The hybrid bot will help you generate income by trading cryptocurrency assets. Averaging provides a lower breakeven point for an overall position in a falling market and higher returns than if the position were not averaged.

Unlike investing in equities where there is no exact result, by investing with Intelfin, you provide yourself with a guaranteed monthly return. With the introduction of new technology in our lives, we offer the key benefits of smart AI + DL algorithms and make money from it.

Tired of working with funds and financiers who take away a significant portion of your profits? Not sure who to entrust your capital to? Intelfin Group will manage your finances and increase your profitability. Save your time and receive 72% p/a and even more.

Trader VS Trading Bots with Hybrid Intelligence

The world has long understood that physical labour has never brought anyone financial independence. Nowadays more and more people are looking for ways to earn on the global web and accumulate capital for start-up investments.

Trading then seems to be a safe option for those who cannot figure out how to invest in digital currency themselves, but want to make money from it. In fact, it is difficult to find an experienced trader who will responsibly take your capital and multiply it. Statistics show that only 1-3% of traders make money and the rest either blow it or trade for nil. Besides, trading is not an exception when it comes to risks. If you don't follow the rules of money management, the trader will only lose the money you invested.

Complicated and risky, right?

A trader alone is confronted with a world of digital assets which is difficult to understand and scrutinise, and which must be constantly analysed. Only on this basis can you develop an effective working strategy and adjust it according to your next steps.

In addition, the market is full of young traders who believe that trading is all about just buying cryptocurrencies, waiting for a short period of time and locking in profits. That might have worked before, but not now. It's a losing strategy that could result in you giving away more than you earn.

The digital world opens up a number of new possibilities – such as arbitrage automated trading. Trading involves a series of actions that are difficult and, in the vast majority of cases, simply impossible for one person to perform:

- register and verify identity on dozens of exchanges;
- find price differences among hundreds or even thousands of coins and tens of exchanges;
- to check withdrawals and inputs on exchanges, as it is important to rebalance (fiat, cryptocurrency, and stable coins) after successful transaction;
- trade among dozens of robots that compete with each other at split-second speeds to be the first to buy and sell;
- have assets on all exchanges and in dozens of coins. The price of crypto currencies is unstable, and rebalancing is a risky venture, as exchanges can shut down withdrawals and deposits. The price can also change dramatically during a transfer from one exchange to another. It is necessary to achieve synchronicity in this process, which is difficult for one person to do;
- monitor exchanges and p2p-platforms, identifying the differences between stable coin and fiat for an added advantage for a successful transaction;
- in addition, there is a strong reliance on proximity to exchanges' servers.

Doing all of these transactions is time consuming and highly strategic. And there is no guarantee that the results will pay off. What is the best thing to do? We offer our clients a solution which the best experts at Intelfin Group have been developing for years – an investment platform with artificial intelligence systems which make the right investment decision in a split second. Even those who are far from investing in digital currency, can start earning from all of these benefits now.

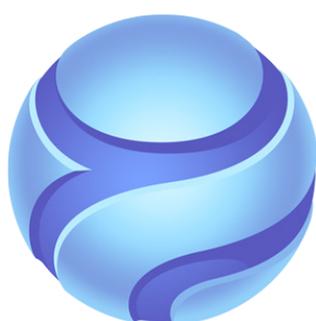

Why is it more profitable to work with bots than with a sole specialist?

- you don't waste time on making transactions. Our robots make decisions for you, while you withdraw income from your account every month;
- we have accounts on all exchanges, we have physical and legal bank accounts in all countries where there are local exchanges, and, according to Central Bank requirements, deposits and withdrawals have to be in local currency;
- all our robots have successfully passed all tests and adjustments and are already connected to all exchanges;
- our servers are located in the same area as the servers of all the exchanges. This means that our robots make the fastest decisions and do not lose time;
- we can successfully trade all currencies on p2p exchanges. For example, Chinese RMB/USDT in relation to USDT/RUB is mostly cheaper, which gives us the additional advantage of conducting arbitrage trades successfully, even when there is no strong difference between exchanges in the stacks.

Take from the world all that it has to offer now - Artificial Intelligence systems are highly efficient and risk-free. Invest in liquidity pools starting from \$300 and earn a monthly income of at least 8% every month. It's time to realize the potential of the crypto industry and keep up with the times, even if you lack knowledge and experience. All this can be made up for with Intelfin.

Looking for someone you can trust your capital to invest in digital products? Intelfin international holding company has created and patented smart algorithms for digital asset exchanges.

Thanks to the hybrid intelligence system, you can earn as much as 8% per month on your capital. Set up a convenient withdrawal day and start investing in liquidity pools.
